Performance Connecting Rod Kits

Connecting Rod Kits sold complete with: Rod, crank pin, crank pin bearing, top end bearing and thrust washers.

Double forged, Wiseco connecting rods maintain superior dimensional consistency through improved grain flow. Shot peening eliminates residual stresses and smoothly blends the rod forging surfaces. Extensive tests verify that shot peened rods provide more consistent dimensioning and surface finish than hand ground and polished rods. This produces superior strength under heavy loads.

Features

- Crank pin bearing radial running clearance is optimized to insure maximum performance.
- Precision engineered oiling slots maximize rod strength and bearing life.
- Top and bottom end rod bores case hardened to 58-62 HRC to optimize bearing running surface.
- Precision honing process ensures ultra round bearing surface.
- Double drilled small ends provide the piston pin with extra lubrication and cooling - Reducing distortion of top end due to thermal transfer from the piston.
