Kawasaki KX250 Crankshaft 1992-04

Motorcycle

Every Wiseco Crankshaft Assembly has double forged and shot peened connecting rods. This superior process has been tested and proven to produce stronger rods with the highest dimension accuracy.

Combined with exceptional crank webs and the highest quality bearings, Wiseco Crankshaft Assemblies are a cut above the rest.

Features

- Shot peened rods
- Optimized crank pin bearing radial running clearance
- Precision honed
- Double drilled small ends
- All rod bores case hardened to 58-62 HRC
- Precision engineered oiling slots
- The latest in caged needle roller bearings
- Highest quality hot rolled steel crank pins
- Silver coated, bronze phosphor, dimpled thrust washers

Benefits

- Superior strength under heavy loads
- Ensures maximum performance
- Guarantees ultra round bearing surface
- Extra lubrication and cooling reduces top end distortion
- Optimizes bearing running surface
- Maximizes rod strength and bearing life
- Provide the highest possible RPM
- Case hardened to 58-62 Rc.
- Increased oil retention and reduced friction

Crankshafts are sold complete with: Connecting rods, top end bearings and inner crankshaft webs. Multi-cylinder applications come complete with main bearings (unless specified otherwise). Pre-assembled and precision trued to OEM specifications. Ready for installation.
